DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-21, drawn to control system for an electric motor, classified in class 318, subclass 432.
 - II. Claims 22-24, drawn to a computer program, classified in class 700, subclass 1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombinations. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombinations as claimed because the control system can use any digital or analog means to direct operation of said motor.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that in order for the reply to this requirement to be complete an election of the invention to be examined even though the requirement is traversed

Art Unit: 2837

(37 CFR 1.143) must be included. Applicant has one month to respond to this restriction requirement.
